with up to 50 potential stallions  
featuring enhanced statistics*

# TrueNicks: An Explanation

## Nicks in History

Compatibilities between stallions from one sire line with mares of another sire line has helped shape the breed since the Eclipse/Herod cross of the late 18th century. These successful crosses, called nicks, have impacted Thoroughbred development through such examples as Hermit/Stockwell, Lexington/Glencoe, Bend Or/Macaroni, and Phalaris/Chaucer. In the modern era, the prolific Mr. Prospector/Northern Dancer cross has produced outstanding racehorses and sires such as Kingmambo, Distorted Humor, and Elusive Quality.

## Fast-Forward to the 21st Century

Computer databases have made it possible to measure and rate nicks, giving rise to a commercial market for such statistics. The first nick ratings offered to the public, though popular, were compromised by incomplete data and yielded results based on hypothetical rather than actual opportunity. This statistical gap was the impetus behind the development of TrueNicks.

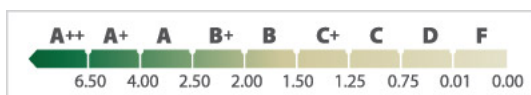

## A Statistically Valid Approach

Unlike other ratings that are calculated based on hypothetical opportunity within a limited group of horses, TrueNicks references the international database of The Jockey Club—the world's most complete record of Thoroughbreds and their performance—to produce a sophisticated rating based on all starters and stakes winners on a given cross.

## The Statistics

The TrueNicks rating is derived from two statistical elements: the Sire Improvement Index (SII) and the Broodmare Sire Improvement Index (BSII). Each figure compares the percentage of progeny stakes winners to starters. An SII of 2.00 indicates that the sire line has twice the percentage of stakes winners with mares of the given broodmare sire line as it does with all other mares. A BSII of 3.00 indicates that mares from the broodmare sire line have 3.00 times the percentage of stakes winners with a given sire line than when bred to all other stallions.

## The TrueNicks Calculation

The TrueNicks rating is then calculated by multiplying the SII and BSII, effectively recognizing the opportunity and performance of the cross. In the example above, an SII of 2.00 and a BSII of 3.00 would result in a TrueNicks variant score of 6.00, expressing a nick that performs six times better than average opportunity, and translating to an A+ TrueNicks rating. Theoretically, any cross can produce a superior racehorse, but TrueNicks is concerned with its frequency of doing so.

## Meaningful Ratings

Referencing the entire database of The Jockey Club during development, the TrueNicks rating was calibrated on a test group of 100,000 international starters. Converting the TrueNicks variant to a letter grade rating—A to F, as in the academic system—reveals some intriguing results that verify the existence of nicks across the Thoroughbred population. For example:

1. While only 13% of Thoroughbreds earn A ratings (A to A++), 37% of stakes winners rate A or better.
2. Thoroughbreds rated B or better (B to A++) represent just 30% of the population, yet three out of four (77%) stakes winners rate B or better.
3. Almost half of Thoroughbreds in general (44%) are on the low end of the scale (rated C through F), yet only two in 25 stakes winners (8%) have these lower ratings.

### Interpreting the Ratings

TrueNicks is a powerful mating tool, but like all pedigree analysis programs it is one part of the picture and should be weighted accordingly. TrueNicks is best used to differentiate between matings or individuals within a similar commercial range, and the rating becomes more powerful when used in proper context. TrueNicks development studies clearly indicate a strong correlation between sire line affinities and success in stakes events; however, we strongly recommend that you consider all factors, such as physical attributes, conformation, aptitude, and class of the pedigree. After all, the goal should be to breed racehorses, not ratings.

### Using Your Report

All TrueNicks broodmare reports include an equineline.com premium edited pedigree; an individual TrueNicks report for the subject mare; a table of selected sires sorted by TrueNicks variant; a table of selected sires sorted by Broodmare Sire Improvement Index (BSII); and an individual TrueNicks report for each hypothetical mating.

Although the stallions in the first table are sorted by variant, we recommend that users pay closer attention to the associated letter grade, as variant scores are not on a linear scale. For example, nicks that have performed below opportunity can only fall between 0.01 and 0.99, while above opportunity nicks can be anywhere from 1.01 to 500 and beyond.

TrueNicks population studies indicate that, all other factors being equal, strongest consideration should be given to matings rated *B+* or better. Of course, matings that result in lower ratings may well still be viable, especially if compensating factors such as class of the sire and dam, or successful patterns of inbreeding and line breeding, are taken into account.

### Using Your Report

The BSII is a unique TrueNicks feature available only to purchasers of TrueNicks broodmare reports. There are examples where an above opportunity TrueNicks rating results from the sire greatly “improving” the broodmare sire, and other examples where the reverse is true. It is optimal to seek matings that give a high BSII score in addition to a *B+* or better TrueNicks rating.

The individual TrueNicks hypothetical mating pages allow for deeper analysis of each prospective mating. Broodmare Analysis and Broodmare Select include our classic, single-page TrueNicks reports with the top five best horses bred on the cross. Broodmare Analysis Plus features TrueNicks Enhanced reports, offering a second page of cross-specific statistics, including auction history, surface performance, win and stakes win percentages, average winning distances, colts and fillies comparisons, and the top 15 horses bred on the cross. In addition to the TrueNicks rating and variant score, both reports show inbreeding (highlighted in color and summarized below the five-generation pedigree) and Dosage Profile details for each mating.

If you have questions about your report, please visit [Truenicks.com](http://Truenicks.com) or contact us at [info@truenicks.com](mailto:info@truenicks.com).

**Pedigree Statistics**

Inbreeding Coefficient	1.96%	Pedigree Completeness	100.00%
Coefficient of Relatedness	2.51%	Unique Ancestors	883/2046
Ancestral History Coefficient	8.91		

Notes on terminology in this report: **Inbreeding Coefficient** measures the mating's degree of inbreeding to 10 generations using Wrights F measure. **Coefficient of Relatedness** measures the degree of relatedness between sire and dam to 10 generations. **Ancestral History Coefficient** counts the number of times that an allele has been identical by descent in an individual's pedigree, thus providing a comprehensive reflection of selection for favorable ancestors/traits over time. Individuals with higher AHC are more likely to contain larger proportions of alleles in their genomes that have been positively selected over many generations. **Pedigree Completeness** is the portion of the pedigree that is on file to 10 generations. **Unique Ancestors** is the number of Unique ancestors in the pedigree found to 10 generations. See more here [www.truenicks.com/pedigreestatics.htm](http://www.truenicks.com/pedigreestatics.htm)

**Pedigree Statistics**

Inbreeding Coefficient	3.12%	Pedigree Completeness	100.00%
Coefficient of Relatedness	4.68%	Unique Ancestors	873/2046
Ancestral History Coefficient	8.73		

Notes on terminology in this report: **Inbreeding Coefficient** measures the mating's degree of inbreeding to 10 generations using Wrights F measure. **Coefficient of Relatedness** measures the degree of relatedness between sire and dam to 10 generations. **Ancestral History Coefficient** counts the number of times that an allele has been identical by descent in an individual's pedigree, thus providing a comprehensive reflection of selection for favorable ancestors/traits over time. Individuals with higher AHC are more likely to contain larger proportions of alleles in their genomes that have been positively selected over many generations. **Pedigree Completeness** is the portion of the pedigree that is on file to 10 generations. **Unique Ancestors** is the number of Unique ancestors in the pedigree found to 10 generations. See more here [www.truenicks.com/pedigreestatics.htm](http://www.truenicks.com/pedigreestatics.htm)

**Pedigree Statistics**

Inbreeding Coefficient	3.09%	Pedigree Completeness	100.00%
Coefficient of Relatedness	4.39%	Unique Ancestors	930/2046
Ancestral History Coefficient	8.75		

Notes on terminology in this report: **Inbreeding Coefficient** measures the mating's degree of inbreeding to 10 generations using Wrights F measure. **Coefficient of Relatedness** measures the degree of relatedness between sire and dam to 10 generations. **Ancestral History Coefficient** counts the number of times that an allele has been identical by descent in an individual's pedigree, thus providing a comprehensive reflection of selection for favorable ancestors/traits over time. Individuals with higher AHC are more likely to contain larger proportions of alleles in their genomes that have been positively selected over many generations. **Pedigree Completeness** is the portion of the pedigree that is on file to 10 generations. **Unique Ancestors** is the number of Unique ancestors in the pedigree found to 10 generations. See more here [www.truenicks.com/pedigreestatics.htm](http://www.truenicks.com/pedigreestatics.htm)

**Pedigree Statistics**

Inbreeding Coefficient	3.03%	Pedigree Completeness	100.00%
Coefficient of Relatedness	4.66%	Unique Ancestors	871/2046
Ancestral History Coefficient	8.74		

Notes on terminology in this report: **Inbreeding Coefficient** measures the mating's degree of inbreeding to 10 generations using Wrights F measure. **Coefficient of Relatedness** measures the degree of relatedness between sire and dam to 10 generations. **Ancestral History Coefficient** counts the number of times that an allele has been identical by descent in an individual's pedigree, thus providing a comprehensive reflection of selection for favorable ancestors/traits over time. Individuals with higher AHC are more likely to contain larger proportions of alleles in their genomes that have been positively selected over many generations. **Pedigree Completeness** is the portion of the pedigree that is on file to 10 generations. **Unique Ancestors** is the number of Unique ancestors in the pedigree found to 10 generations. **Pedigree Statistics**

Inbreeding Coefficient	2.12%	Pedigree Completeness	100.00%
Coefficient of Relatedness	2.64%	Unique Ancestors	1000/2046
Ancestral History Coefficient	8.90		

Notes on terminology in this report: **Inbreeding Coefficient** measures the mating's degree of inbreeding to 10 generations using Wrights F measure. **Coefficient of Relatedness** measures the degree of relatedness between sire and dam to 10 generations. **Ancestral History Coefficient** counts the number of times that an allele has been identical by descent in an individual's pedigree, thus providing a comprehensive reflection of selection for favorable ancestors/traits over time. Individuals with higher AHC are more likely to contain larger proportions of alleles in their genomes that have been positively selected over many generations. **Pedigree Completeness** is the portion of the pedigree that is on file to 10 generations. **Unique Ancestors** is the number of Unique ancestors in the pedigree found to 10 generations. **Pedigree Statistics**

Inbreeding Coefficient	2.98%	Pedigree Completeness	100.00%
Coefficient of Relatedness	4.56%	Unique Ancestors	925/2046
Ancestral History Coefficient	8.75		

Notes on terminology in this report: **Inbreeding Coefficient** measures the mating's degree of inbreeding to 10 generations using Wrights F measure. **Coefficient of Relatedness** measures the degree of relatedness between sire and dam to 10 generations. **Ancestral History Coefficient** counts the number of times that an allele has been identical by descent in an individual's pedigree, thus providing a comprehensive reflection of selection for favorable ancestors/traits over time. Individuals with higher AHC are more likely to contain larger proportions of alleles in their genomes that have been positively selected over many generations. **Pedigree Completeness** is the portion of the pedigree that is on file to 10 generations. **Unique Ancestors** is the number of Unique ancestors in the pedigree found to 10 generations. **Pedigree Statistics**

Inbreeding Coefficient	2.62%	Pedigree Completeness	100.00%
Coefficient of Relatedness	3.82%	Unique Ancestors	893/2046
Ancestral History Coefficient	8.82		

Notes on terminology in this report: **Inbreeding Coefficient** measures the mating's degree of inbreeding to 10 generations using Wrights F measure. **Coefficient of Relatedness** measures the degree of relatedness between sire and dam to 10 generations. **Ancestral History Coefficient** counts the number of times that an allele has been identical by descent in an individual's pedigree, thus providing a comprehensive reflection of selection for favorable ancestors/traits over time. Individuals with higher AHC are more likely to contain larger proportions of alleles in their genomes that have been positively selected over many generations. **Pedigree Completeness** is the portion of the pedigree that is on file to 10 generations. **Unique Ancestors** is the number of Unique ancestors in the pedigree found to 10 generations. **Pedigree Statistics**

Inbreeding Coefficient	8.40%	Pedigree Completeness	100.00%
Coefficient of Relatedness	15.38%	Unique Ancestors	851/2046
Ancestral History Coefficient	6.64		

Notes on terminology in this report: **Inbreeding Coefficient** measures the mating's degree of inbreeding to 10 generations using Wrights F measure. **Coefficient of Relatedness** measures the degree of relatedness between sire and dam to 10 generations. **Ancestral History Coefficient** counts the number of times that an allele has been identical by descent in an individual's pedigree, thus providing a comprehensive reflection of selection for favorable ancestors/traits over time. Individuals with higher AHC are more likely to contain larger proportions of alleles in their genomes that have been positively selected over many generations. **Pedigree Completeness** is the portion of the pedigree that is on file to 10 generations. **Unique Ancestors** is the number of Unique ancestors in the pedigree found to 10 generations.
